

Go Green Against Climate Change

Footprint activity

Who will be involved?

- 20 students from your school (all involved in the project)

How long?

- 5 days (one school week in January)

What?

- Each student record how (what kind of transport) he/she went to school
 - They will write in the form I've sent you
 - They will also write there, how many kilometers it is from their home to school
- The second activity focuses on one change in their daily lives. They have to choose one thing, which they usually do, but they can do it in a more sustainable way (take a shower instead of bath, take a bicycle instead of car, eat local fruit/vegetable instead of imported,...)
 - They have to do it at least one week, one month, one year, forever....
